

2-factor authorization for LIB Dokuwiki

There are 2 methods of 2-factor authentication: Google Authenticator or email. The former is already known from Sage, here a token from a second device is used, the latter sends an e-mail to the stored address with the token.

The decision as to which method is used is clear, but can be reset by an admin.

Attention! Every time your own IP address changes, authentication must be repeated (e.g. when

switching from a desktop computer to a laptop)

The individual steps:

Before anything else: Log out of Dokuwiki.

- Log in with your user name and password and click on “**Login**”.
- Now the selection appears, which method you want to use in the future for 2 factor authorization

1st method - Google Authenticator:

The screenshot shows the DokuWiki interface. At the top, there's a header with the DokuWiki logo, a link to the homepage, and links to 'Impressum' and 'Data Policy'. A user 'testuser (test)' is logged in. The main content area is titled 'Two-Factor Settings'. It contains a search bar, a breadcrumb trail '» en : twofactor_profile', and a section header 'Two-Factor Settings'. Below the header, there's a paragraph explaining that this is where users can configure a second factor for login. Another paragraph states that the wiki requires two-factor authentication and that at least one mechanism must be configured. A form titled 'Add Two-Factor Mechanism' is present, with a dropdown menu for 'Mechanism' set to 'Google Authenticator (TOTP)' and a 'Setup' button. The footer of the page includes a license notice (CC Attribution-Share Alike 4.0 International) and a note that the page is powered by LIB Biodiversity Datacenter.

Have the LinOTP app (or the app used for 2FA authentication in Sage) ready on your cell phone.

1.1 A **QR code** will appear on the next screen. Scan this with the LinOTP app (click on the “+” sign at the bottom right).

Two-Factor Settings

This is where you can configure what you want to use as a second factor besides your usual credentials when logging into DokuWiki. What options are available depends on what your administrator has configured.

Google Authenticator (TOTP)

Scan the QR code with Google Authenticator or any compatible TOTP application. If your app can't scan QR codes, copy and paste the shown secret manually.

I27KZGG6Dwh4UMS6

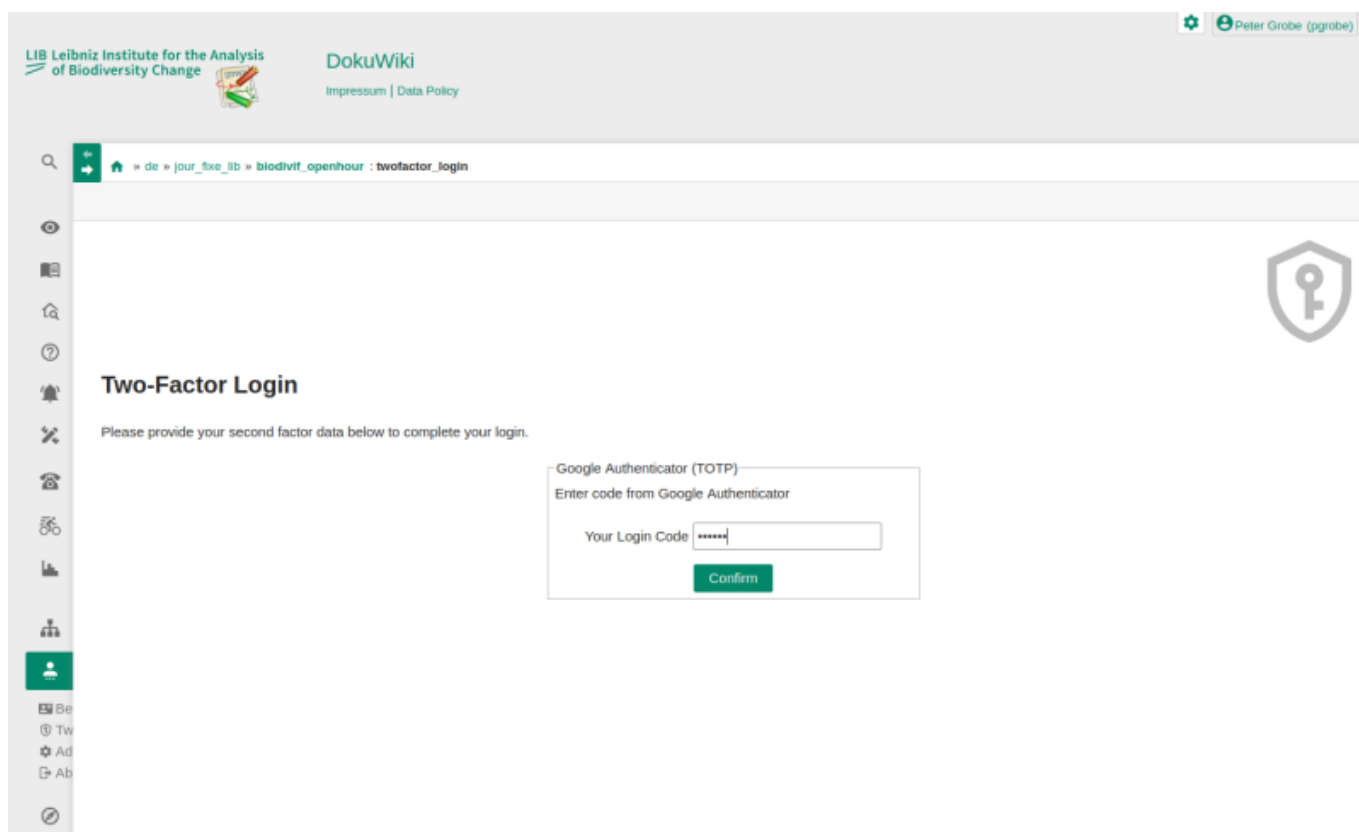

You need to verify that Google Authenticator is working before you can use it to login.

Your Login Code

Confirm Abbrechen

1.2 Enter the **first code** to pair the devices with each other

1.3 Confirm and enter the **second token** (possibly renew the token on the cell phone if it has expired).

Two-Factor Login

Please provide your second factor data below to complete your login.

Google Authenticator (TOTP)

Enter code from Google Authenticator

Your Login Code

Confirm

Done.

At the next login **only step 1.3** needs to be executed.

2nd method - e-mail:

Open your favorite e-mail program and log in to the LIB account.

2.1 Choose the **Email option** in the LIB Dokuwiki and click „Setup“:

Antworten | v

Hi test

Someone tried to log in using your account. If that was you, please use the code below to confirm your login.

****182675****

This code is only valid for a limited time.

This mail was generated by DokuWiki at

<https://wiki.leibniz-lib.de/>

2.3 Enter the **token** specified there (without the surrounding asterisks) and confirm. The e-mail address is now connected to the Authenticator plugin.

2.4 A **second email** is sent for authentication. Enter the token contained in the e-mail again and confirm.

Done.

At the next login **only step 2.4** needs to be performed.

Change the selected method

You may change the selected Two-Factor method by choosing **User Tools → Two-Factor Settings** in the navigation bar on the left. By Pressing the **Revoke Selected Mechanism**-button you will be guided to the setup of the two factor setup again.
